KALINGA

Knowledge and Access Link for STI Navigation, Guidance, and Assistance

BRAND IDENTITY & PWA DESIGN GUIDELINES

Consolidated direction | Version 1.0 | 29 October 2026

Care without judgment. Guidance without fear.

Provisional brand tagline; subject to a separate wording review before public launch.

A compassionate, discreet, and trustworthy digital health navigation identity for young people. Initial service area: Marinduque, Philippines.

Status: approved brand direction and UX recommendations. This guide is not evidence of verified clinic partnerships, clinical content review, or production readiness.

10 Developer handoff and production checklist

Approval ledger

Milestone	Decision	Status
1. Logo	Symbolic K / balanced, caring but subtle	Direction selected
2. Colors	Gentle & Reassuring - Palette B	Approved / locked
3. Visual language	Plus Jakarta Sans, Inter, Lucide, soft geometric vectors	Approved / locked
4.1-4.3 UX	Gentle Guidance, Home/Nav, Information Hub, Privacy Pathway	Approved / locked
4.4 UX	Clinic Search, Profile and Appointment Request	Approved in final instruction
4.5 + UI consolidation	Supporting screens and reusable UI recommendations	Approved as recommended direction
5. Consolidation	This brand guide	Delivered

Governance note: The logo concept is selected, but the previously generated SVG reconstruction still needs final artwork review and recoloring into the official palette. This document does not mislabel that asset as a signed-off master.

01 Brand strategy and voice

Mission

Help young people aged 15-24 progress from STI-related questions or suspected exposure to informed, professional testing and follow-up care by removing information, privacy, stigma, and service-navigation barriers.

Positioning

KALINGA is a mobile-first, privacy-conscious PWA connecting medically reviewed educational information with verified clinic details and supported appointment-request procedures. It does not diagnose, interpret laboratory results or guarantee anonymous testing.

Personality and tone

Pillar	Write and design this way
Compassionate	Supportive, nonjudgmental, emotionally safe
Trustworthy	Verified, clear, transparent about limitations
Empowering	Offer informed choice without pressure
Discreet	Use neutral notification language and restrained app imagery
Youth-friendly	Modern, conversational, never childish

Voice examples

Prefer	Avoid
Explore testing options.	You must get tested now.
Know what to expect at a clinic.	Stop being afraid of testing.
Check this clinic's stated confidentiality procedures.	Your visit is 100% anonymous.
Your request is pending clinic review.	Your appointment is booked!

02 Logo identity and usage

Selected creative direction: Symbolic K

The brand mark uses a stylized K with a flowing pathway and subtle growth/care symbolism. Its purpose is to express movement toward help, confidence and reassurance without overt STI or medical symbols.

Existing concept asset shown as a shape reference only. Its original colors are NOT the official Palette B colors.

Required production variants

- Primary horizontal mark and wordmark; secondary stacked arrangement.
- Standalone PWA icon with safe padding; light and dark background options.
- One-color deep-indigo, white-reversed, and grayscale versions.
- SVG master artwork with outlined paths or controlled editable source; transparent PNG exports.

Proposed application rules

- Apply official Deep Indigo (#34496D) to the main K structure, Periwinkle (#586AA7) to the pathway, with Dusty Rose and Peach Glow as limited accents. Recolor and review the logo master before use.
- Preserve proportional scale and clear space; provisional minimum clear space = height of the capital K / 4 on all sides. Validate against final artwork.
- Test at 32px, 48px and 64px; if details disappear, use a simplified icon-only master.
- Never stretch, rotate, add uncontrolled shadows, or place the full acronym expansion inside a tiny app icon.
- Use the exact name KALINGA with no diacritics. Long-form expansion appears in About or institutional contexts.

03 Official color system

Gentle & Reassuring — approved

Token	HEX	Use
Deep Indigo	#34496D	Primary brand, headings, top navigation
Periwinkle	#586AA7	Primary interactive accents, pathway progress
Cloud Lavender	#E9EDFC	Supportive surfaces and informational panels
Dusty Rose	#D78FA3	Compassion accents and illustrations
Peach Glow	#F4C9AA	Warm accents, contextual highlights
Canvas White	#FAFBFE	Application canvas
Slate Ink	#1D2C43	Primary body text
Muted Blue Gray	#52627B	Secondary copy
Soft Border	#DDE3F0	Dividers and field borders

Rules

- Deep Indigo with white text is the preferred strong CTA combination; Periwinkle with white is available when contrast passes in the exact rendered state.
- Use Slate Ink on Cloud Lavender, Dusty Rose and Peach Glow; avoid white body copy on light accents.
- Do not use accent hues as the sole indicator of errors, approval or status.
- Semantic success/warning/error/focus colors are functional UI tokens that require contrast and usability review; do not equate Dusty Rose with a universal error state.

04 Typography and iconography

Approved font pairing

Plus Jakarta Sans: display headings and section titles (600-700). Inter: paragraphs, labels, buttons, tables and interface controls (400-600). The custom logo wordmark stays separate.

Token	Mobile	Weight / line height
Display	36px	700 / 44px
H1	30px	700 / 38px
H2	24px	600 / 32px
H3	20px	600 / 28px
Body	16px	400 / 24px
Supporting	14px	400 / 21px
Button	16px	600 / 24px
Metadata	12px	500 / 18px

Icons

Lucide outline icons; default 24px artboard and 2px rounded strokes. Use consistent visual weight, visible touch target areas, and adjacent text when an icon alone may be ambiguous.

- Book Open: Learn; Shield Check: Privacy; Map Pin: Clinics; Calendar Check: Appointments; Heart Handshake: Care; Message Circle: Guidance.
- Icons are visual cues, not replacements for accessible text labels or alt descriptions.
- Avoid mixing filled, 3D, photographic and outline icon styles within the same navigation system.

Font licensing and loading

Load licensed web font files through the deployment build or a trusted provider, with font-display: swap and a system sans-serif fallback. Font files are not redistributed in this package.

05 Illustration and layout language

Illustration direction

Soft, geometric vector forms: flowing paths, gentle curves, destination markers, inclusive people when useful, and restrained warm accents. Avoid fear-based medical imagery, anatomy clichés and visual promises of total anonymity.

Layout tokens

Element	Rule
Base spacing	8px rhythm; 4px micro adjustments where needed
Mobile horizontal margin	16px default; increase on larger viewports
Desktop container	Constrained centered width; content-dependent responsive columns
Button radius	12px
Card radius	16px
Feature panel radius	20-24px
Minimum interactive area	At least 44 × 44px recommended
Surface depth	Subtle shadows only when meaningfully needed; borders must remain visible

Brand photography

If photography is later used, choose authentic, consensual, culturally relevant imagery that respects privacy and diversity. Do not portray a person as an STI patient or imply diagnosis through stock photography.

06 PWA architecture and navigation

Experience direction: Gentle Guidance

A supportive hero, two immediate actions (Explore Testing Options / Learn About STIs), discreet education access and straightforward clinic discovery. No account should be necessary for browsing basic information.

Mobile navigation	Destination
Home	Welcoming overview; primary CTA; guidance and urgent-care notice
Learn	Topic cards and educational content
Clinics	Search, filters, facility profiles
Menu	Privacy, help/FAQs and other secondary routes

Core flow

Home → Learn or Privacy-Matched Pathway → Clinic Search → Clinic Profile → Appointment Request → Pending Clinic Review → Confirmation/Alternative → Visit Preparation → Professional Testing → Results and Care Navigation.

Responsive behavior

- Mobile: single-column layout, fixed bottom navigation and collapsible menu.
- Desktop: horizontal navigation, split hero, wider article and clinic discovery layouts.
- Use the pathway as a focused central stepper even on large screens.
- Preserve an immediately visible urgent-care route outside routine booking.

07 Core screen specifications

7.1 Information Hub

Topic cards: STI basics, signs/symptoms, prevention, testing, treatment/follow-up, privacy FAQs. Each article should show a plain-language summary, medically reviewed detail, next-step action and last-reviewed date.

7.2 Privacy-Matched Testing Pathway

- Step 1: Optional concerns (privacy, judgment, costs, travel and unfamiliar procedures).
- Step 2: Review selected concerns and identify time-sensitive HIV exposure.
- Step 3: Explain potential matches based on verified provider practices; reveal unknown information instead of inventing it.
- Users may skip optional questions and browse the full clinic directory.

7.3 Clinic Search

Search by location/facility; filter by verified service type, municipality, cost disclosure, booking requirements, and relevant privacy practices. Filtered results and empty states must be clear.

7.4 Clinic Profile

Show overview, service categories, contact/location, clinic hours, verified confidentiality practices, fees, booking/ID/consent requirements, preparation guidance and the date of latest verification.

7.5 Appointment Request

Show exactly which information is required by the selected provider before submission. Preferred date/time is a request, not real-time availability. After submission show Pending Clinic Review; only clinic confirmation establishes an appointment.

08 Supporting screens & UI components

Additional screens consolidated as recommended

- Request status: Pending Review, Confirmed, Alternative Required, Cancelled (where clinic workflow supports each state).
- Appointment details: neutral confirmation, location, preparation instructions and optional neutral reminders.
- Care navigation: how to obtain results from the provider and where to seek additional assistance; the PWA will not store diagnoses or results in its first version.
- Help and privacy: FAQs, consent/age guidance, contact and disclosure explanations.
- Clinic staff dashboard: managed clinic listings, scoped appointment queue, status updates and controlled access.
- Provincial/technical administration: content review, directory oversight, least-privilege permissions and aggregate, privacy-preserving reports.

Reusable components

Component	Required states
Primary / secondary button	Default, hover, focus, disabled, loading
Search + filter controls	Idle, active, clear, empty results
Topic / clinic cards	Default, selected, keyboard focus
Progress stepper	Current, completed, upcoming
Forms	Required, optional, invalid, loading, submitted
Status message	Pending, confirmed, alternative, error
Privacy notice	Provider-confirmed detail, unknown/unverified detail
Navigation	Mobile active item, desktop state, responsive menu

Copy examples

"Your request has been sent for clinic review" is preferred over "Your appointment is confirmed" until confirmation exists. Notifications should avoid displaying sensitive STI-specific wording on shared device lock screens.

09 Privacy, accessibility & clinical guardrails

Privacy by design

- Anonymous educational browsing is not the same as anonymous testing.
- Use provider-specific data minimization and explicit disclosure of submitted fields.
- Confirm requirements for minors with qualified providers and applicable Philippine rules before launch.
- Use role-restricted staff access, retention schedules, secure connections, logging and incident response.
- Do not collect or store test results, diagnoses or medical advice within the initial PWA scope.
- Do not claim a clinic is verified unless the verification scope and date are documented.

Urgent medical exception

Possible HIV exposure within 72 hours should trigger prominent guidance to seek urgent professional evaluation for PEP, not require the ordinary matching or booking flow. The wording and routing must receive medical review before public launch.

Accessibility requirements

- Target WCAG 2.2 AA; assess ordinary text at 4.5:1 contrast and meaningful UI indicators at 3:1 as applicable.
- Support keyboard focus, descriptive labels, error text, 200% text resizing, logical reading order and screen readers.
- Ensure the interface never relies solely on color to communicate urgency, completion, privacy or booking status.
- Test Android browsers and small phones as well as desktop browsers, including slow and intermittent connections.

10 Developer handoff & production checklist

Suggested design tokens

CSS custom property	Value
--color-indigo	#34496D
--color-periwinkle	#586AA7
--color-lavender	#E9EDFC
--color-rose	#D78FA3
--color-peach	#F4C9AA
--color-white	#FAFBFE
--color-ink	#1D2C43
--color-muted	#52627B
--color-border	#DDE3F0

Asset inventory

- Logo concept pack: existing reconstructed SVG/PNG assets are references. Recolor and visually QA the final masters to match Palette B.
- Typography: Plus Jakarta Sans / Inter files loaded from appropriately licensed sources, not bundled.
- Icons: Lucide React icons or consistent SVG exports.
- Deliver token definitions, responsive breakpoints, component specs, interaction states and accessibility notes to the frontend team.

Release gates — not yet verified

- Finalize and approve recolored Symbolic K master and favicon/PWA masks.
- Confirm actual facility agreements, clinical service availability, fees and confidentiality policies.
- Obtain qualified medical review of educational content and urgent PEP messaging.
- Verify booking/consent procedures, especially for minors, privacy notice and retention policy.
- Run usability tests with representative 15-24-year-old users and accessibility audits.
- Security and privacy review, including role permissions, sensitive notifications and data protection.

Final adoption statement

This document consolidates the creative direction explicitly approved through Milestones 1-4 and the recommended supporting design system accepted for final consolidation. It is the current design reference, not a certification of clinical, legal or technical readiness.
